About Symphony Environmental Technologies plc

SYMPHONY ENVIRONMENTAL TECHNOLOGIES PLC is a specialist in controlled-life plastic technology and products - a system that works by a process called oxo-biodegradation. The technology is branded d2w® and appears as a droplet logo on many thousands of tonnes of plastic packaging and other plastic products around the world.

Symphony's d2w® technology turns plastic at the end of its service-life into a material with a completely different molecular structure. At that stage it is no longer a plastic and can be bioassimilated in the open environment in the same way as a leaf. For a video of d2w® plastic degrading see <http://degradable.net/play-videos/4>

Symphony also supplies d2p technology that can be used in most types of plastic products to help reduce the risk of contamination by harmful bacteria and fungi. In addition Symphony has developed d2Detector, a portable device which analyses plastics and detects counterfeit products, together with tagging and tracer technology for further security.

Symphony has a diverse and growing customer-base and has established itself successfully as an international business with 74 distributors around the world. Products made with d2w® plastic technology can now be found in 96 countries and in many different product applications.

Symphony is a member of The British Plastics Federation (BPF), the Oxo-biodegradable Plastics Association ([www.biodeg.org](http://www.biodeg.org)), and the Society for the Chemical Industry (UK). Symphony is also a member of the Pacific Basin Environmental Council, Symphony actively participates in the Committee work of the British Standards Institute (BSI), the American Standards Organisation (ASTM), the European Standards Organisation (CEN), and the International Standards Organisation (ISO).

Symphony is also developing innovative and cost-effective anti-counterfeiting, and recycling systems to convert scrap tyres and other waste-streams into valuable products.

Symphony is accredited to ISO9001 and ISO14001. Further information on the Symphony Group can be found at [www.d2w.net](http://www.d2w.net).
