SYMPHONY ENVIRONMENTAL TECHNOLOGIES PLC

("Symphony")

SUCCESSFUL K-SHOW

Symphony Environmental Technologies Plc (AIM:SYM), global specialists in 'making plastic smarter' are pleased to announce the successful presentation and launch of new antimicrobial, insecticidal, anti-rodent, odour absorbers and flame retardant products and technologies at the K-Show, in Dusseldorf, Germany.

Symphony also introduced a new compostable plastic product, which complies with European Standard EN13432 and American Standard ASTM D6400.

The K-Show is the world's largest plastics exhibition, with visitor attendance this year expected to have exceeded 200,000. During the eight-day show, Symphony welcomed more than 600 visitors from more than 30 countries to their stand and have received more than 20 new trials as a result, including from multi-billion dollar, global corporations.

CEO Michael Laurier said: "This is the fourth time that Symphony have exhibited at the K-Show, which gets bigger and better each time. This year's show has been extremely positive for Symphony and we were able to interact with a wide range of companies from a variety of business sectors. We are pleased to be leaving Dusseldorf with more than 20 exciting new commercial trials and development projects to progress."

NOTES TO EDITORS:

About Symphony Environmental Technologies plc

Symphony has recently developed a range of additives, concentrates and masterbatches marketed as d₂p®, which can be incorporated in a wide variety of plastic and non-plastic products so as to give them protection against many different types of bacteria, fungi, algae, mould and insects as well as protection against fire and odours.

In addition, Symphony has developed d₂w® controlled-life plastic technology which causes ordinary plastic to convert at the end of its service-life into biodegradable materials. It is then no longer a plastic and can be bioassimilated in the open environment in the same way as a leaf. The technology is now well-established and Symphony's d₂w brand appears as a droplet logo on many thousands of tonnes of plastic packaging and other plastic products around the world. In some countries this type of plastic is mandatory. For a video of d₂w plastic degrading see <http://degradable.net/play-videos/4>

Symphony has also developed the d₂Detector®, a portable device which analyses plastics and detects counterfeit products. Symphony's d₂t tagging and tracer technology is also available for further security. See www.d2t.net

Symphony has a diverse and growing customer-base and has established itself as an international business with 74 distributors around the world. Products made with Symphony's plastic technologies are now available in 97 countries and in many different products. Symphony is certified to ISO9001 and ISO14001.

Symphony is a member of The Oxo-biodegradable Plastics Association (www.biodeg.org) (OPA), and the Pacific Basin Environmental Council. Symphony actively participates in the work of the Society for the Chemical Industry (SCI-UK), the British Standards Institute (BSI), the American Standards Organisation (ASTM), the European Standards Organisation (CEN), and the International Standards Organisation (ISO).
